

FROM HOTBOX TO HAVEN

9 STEP GUIDE TO
COOLING YOUR HOME IN
10 DAYS OR LESS.

STAGE ONE ASSESS

STEP 1 ON SITE ASSESSMENT

Our technicians will visit your home to evaluate how to best customise a cooling solution that meets your requirements and budget. We will assess the layout, roof space and size of your home to design the best system for your home.

STEP 2 COOLING EVALUATION

After completing the technical on site assessment our technicians will present you with multiple options depending your requirements, budget and cooling needs. In this step you will select the cooling system that best meets your criteria with expert guidance from our team.

STEP 3 EFFICIENCY OPTIONS

Now that we have selected a cooling system for your home our team will work with you to customise the most energy efficient system you've selected. We consider how different control systems and cooling components can impact energy efficiency and select an option best suited to your cooling system.

STAGE TWO PLAN

STEP 4 DESIGN PLAN

After all technical selections are made we move on to the design phase. You can design the system yourself. Our technicians will guide you through the design process and deliver detailed plans of where each vent, remotes, indoor outlets and outdoor units will be positioned.

STEP 5 PRE-INSTALL CHECKLIST

Now that all details have been confirmed you will be presented with a pre-installation checklist. This checklist confirms all the technical and design elements for your cooling systems. Once signed off by you, the client we will commence planning your installation.

STEP 6 FABRICATION & PLANNING

This is the easy part for you! Our team will organise design and delivery of your system. Each cooling system is custom fabricated here in Australia. Once confirmed we will book a date for your installation. You will be presented with a guide on what to expect on the day so you know exactly what to expect in Stage Three.

STAGE THREE INSTALL

STEP 7 SYSTEM INSTALLATION

The day is finally here! We will install the system in your home according to all technical and design requirements confirmed in the pre-installation checklist. We promise to treat your home like it is our own, with respect.

STEP 8 CLIENT TRAINING

After completing the technical on site assessment our technicians will present you with multiple options depending your requirements, budget and cooling needs. In this step you will select the cooling system that best meets your criteria with expert guidance from our team.

STEP 9 QUALITY ASSURANCE

Now that we have selected a cooling system for your home our team will work with you to customise the most energy efficient system you've selected. We consider how different control systems and cooling components can impact energy efficiency and select an option best suited to your cooling system.
